

Mitigating Reputational Risk for Brands and Retailers Sourcing in the Americas

EMBED

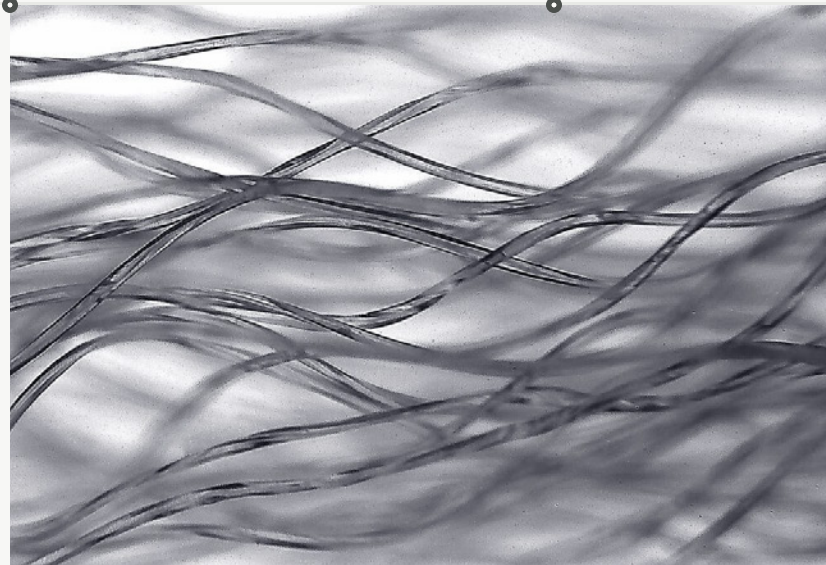

VERIFY

REPORT

THE NEED

YarnProof™ delivers the polyester filament yarn solution brands and retailers need – the only tracer delivering immediately-detectable verification for the qualification of regional production. This provides:

- Assurance that brands and retailers are getting the goods they specify
- Defense against falsely-claimed compliant goods imported under the USMCA and CAFTA-DR
- Protection for regional producers who are making product in the Americas
- Qualifiable evidence to decrease reputational risk for brands and retailers

THE HOW

YarnProof creates a verifiable signature that travels with the material throughout the supply chain:

- Embedded, invisible, and permanent tracer is directly added into polyester filament yarn during extrusion
- Targeted technology powered by FibreTrace®, is detectable from yarn through finished article
- Testing is immediately verifiable using a handheld detector
- Additional lab testing offers further validation for low-content articles

North and Central American Polyester Filament Manufacturers Have United to Deliver This Critical Solution
Protecting the Reputations of All Who Source in Region and the Integrity of Regional Manufacturing
